

WellCAP[®]

IADC WELL CONTROL ACCREDITATION PROGRAM

BULLETIN 10-01

July 2010

This bulletin is issued to all training providers that are accredited or are now in the process of completing an application for WellCAP accreditation.

CLARIFICATION OF WELLCAP TESTING REQUIREMENTS

The IADC Well Control Committee developed Testing Protocol for administration of WellCAP written tests in 2007 and published the Protocol as Bulletin 07-02. This current bulletin provides clarification of the Test Protocol section that discusses materials accessible to students during the test.

The Test Protocol permits test candidates to have the following items available for use during the written test:

- a. Formula sheet supplied by the training provider
- b. Blank kill sheet(s) supplied by the provider
- c. Reference tables, charts (for example, Halliburton "Red Book")
- d. Handheld calculator.

The formula sheet must be supplied as a separate document, and may not be part of the course manual or other handout or reference document. It is to be a standard formula sheet prepared by the training provider and available to each test candidate. It is not to be a formula sheet of the test candidate's creation.

Reference tables and charts may be supplied in the form of a reference document as the Halliburton "Red Book". They should not be part of the course manual or course handouts that contain information other than reference tables and charts.

Calculators should be the non-programmable type, preferably supplied by the training provider.

Additionally, this listing of available materials clearly excludes use of the course manual, homework assignments, class notes and other technical reference materials during testing.

This bulletin supersedes all versions of WCT-1 and prior Bulletins dated prior to July 2010. For more information, contact IADC.
