IADC WELL CONTROL ACCREDITATION PROGRAM

BULLETIN 97-01

March 1997

This bulletin is issued to all schools which are accredited or are now in the process of completing an Application for Accreditation.

WORKOVER/COMPLETION CURRICULUM GUIDELINES

IADC is pleased to announce the implementation of its WellCAP curriculum guidelines for well workover and well completion.

Schools wishing to add this curriculum to their existing courses will find in this package the materials needed to do so. Enclosed are the following:

Form WCT-2W — This is the core curriculum/job skills document for well workover and well completion operations.

Form WCT-2D — This is the core curriculum/job skills document for drilling operations. The form number has been changed from the previous WCT-2; *the drilling curriculum has not changed.*

Form WCT-3 — This is the WellCAP application form, revised to include the workover/completion curriculum. Schools which have not yet applied for accreditation should use this application instead of any earlier versions. Schools which are already accredited need only submit page 8 with a detailed course outline and other required course documentation.

A combined drilling/completion/workover course will require at least 28 hours of instruction for a surface course, or at least 31 hours for a surface and subsea course. Testing requirements are identical to those for the drilling curriculum.

The Handbook for Accreditation will be revised in the near future to reflect the addition of this new curriculum. A copy of the revised Handbook will be sent to all schools that have been accredited or that have accreditation pending.

Please contact IADC if you have any questions or if you need further information.
